What is Cyber Sentinel?

Cyber Sentinel is a next-generation Security Information and Event Management (SIEM) platform designed for enterprise environments. Our advanced solution combines cutting-edge artificial intelligence and machine learning algorithms to provide unparalleled threat detection capabilities.

Cyber Sentinel Internal Security
Solution – PIM, PAM, PUM

Cyber Sentinel AD Server (Active
Directory Protection)

Cyber Sentinel SSE
(Security Service Edge)

Cyber Sentinel SOAR
(Security Orchestration, Automation,
and Response)

Cyber Sentinel WAF
(Web Application Firewall)

Cyber Sentinel

AI-Driven Cyber Defence Platform

Cyber Sentinel is an advanced, enterprise-grade AI-powered SOC platform combining **SIEM, SOAR, Threat Intelligence, UEBA, Log Management and Compliance Monitoring** in a single unified engine. It provides real-time threat detection, automated incident response and deep visibility across on-premise, cloud and hybrid environments.

KEY CAPABILITIES

Next-Gen SIEM Engine with 128K–154K+ correlation rules and continuous threat feed integrations.

AI-Driven SOC Automation for incident, anomaly detection, false-positive reduction and automated workflows.

100+ Integrations across firewalls, endpoints, servers, cloud, network devices and third-party security tools.

High-Volume Log Processing with real-time ingestion and configurable retention periods.

Behavior Analytics (UEBA) to track user/device deviations and insider threat patterns.

Forensic Analytics with complete event timelines and evidence preservation.

Regulatory Compliance: GDPR, HIPAA, ISO-27001 alignment, audit logs and reporting.

Cyber Sentinel
Detect | Defend | Comply

virtualgalaxy®
Virtual Galaxy Infotech Limited

Operational Benefits

40–60% reduction in manual SOC workload

Faster MTTD / MTTR through auto-correlation & AI-driven decisioning

Improved compliance readiness with automated audit trails

Centralized security visibility across distributed environments

CyberSentinel SIEM – Security Information & Event Management

Our SIEM solution offers a comprehensive approach to threat detection and management, ensuring your organization stays ahead of evolving cyber threats.

Outcome: Rapid detection, reduced response time, and proactive threat management.

End-to-End Privileged Security with PIM, PAM, and PUM

Our integrated suite minimizes insider threats and privilege misuse, providing unparalleled control over your most critical assets.

PIM **(Privileged Identity Management)**

- Just-in-time access for elevated permissions.
- Role-based controls & auto-expiring privileges.
- Approval workflows and comprehensive audit trails.

PAM **(Privileged Access Management)**

- Secure credential vault with automated password rotation
- Session monitoring and full video session recording
- Command filtering and keystroke logging

PUM **(Privileged User Management)**

- User Directory Integration: Seamless connection with your identity provider.
- Multi-Factor Authentication: Enhanced security for privileged access.
- User Behavior Analytics: Baseline normal activities and flag anomalies.

Strengthening Enterprise Identity Core – AD Protection

Protecting your Active Directory is crucial. Our solution safeguards against common vulnerabilities and sophisticated attacks, ensuring the integrity of your identity infrastructure.

Outcome: Secures the backbone of enterprise identity and stops domain takeovers, preventing widespread compromise.

Protecting Cloud Access & Remote Work with SSE

Our Security Service Edge (SSE) solution extends enterprise-grade security to your cloud environment and remote workforce, ensuring secure access and data protection anywhere.

Zero Trust Network Access (ZTNA)

Replaces traditional VPNs with identity-aware, policy-based access for enhanced security.

Secure Web Gateway (SWG)

Filters malicious content, blocks phishing attempts, and prevents data loss (DLP) breaches.

Cloud Access Security Broker (CASB)

Monitors SaaS app usage, detects shadow IT, and enforces policies on apps like Office365, GDrive, Slack.

Runtime Security Embedded into Apps with RASP

CyberSentinel RASP is designed to provide comprehensive, real-time protection for mobile applications. Leveraging advanced RASP+ features, it creates a formidable defence against a wide array of sophisticated threats.

CORE CAPABILITIES

API Protection

Ensuring secure, uncompromised communication between your mobile app and backend services.

Hardening SDK

Robust code obfuscation and integrity checks, making reverse engineering extremely difficult

Malware Detection SDK

Proactive runtime threat detection to identify and mitigate malicious software.

Web Application Firewall (WAF)

Real-Time Threat Detection & Blocking

Protects web applications instantly from SQLi, XSS, CSRF, and other common attacks.

OWASP Top 10 Coverage

Specifically designed to mitigate the most common and critical web vulnerabilities listed by OWASP.

Virtual Patching

Protects against newly discovered vulnerabilities before application code is updated.

DDoS Protection at Application Layer

Filters malicious bot traffic and throttles volumetric attacks targeting web endpoints.

Bot & API Abuse Protection

Identifies and blocks automated bots, scrapers, and API misuse

The CyberSentinel Promise: Unified Security

CyberSentinel offers a cohesive, modular security ecosystem designed for resilience and agility across all environments.

Unified Platform

Modular components work together seamlessly for comprehensive protection

Fast Deployment

Quick implementation with clear, measurable ROI

Real-time & Automated

Instant threat detection, access governance, and compliance automation.

Hybrid Cloud Ready

Built for hybrid cloud, on-prem, and remote workforces.

Vault: Enterprise Secrets Management & Security

Modern Secrets Management for Cloud-Native Organizations

Cyber Sentinel
Detect | Defend | Comply

virtualgalaxy
Virtual Galaxy Infotech Limited

Modern Security Challenges Organizations Face

Today's complex IT landscape introduces significant security vulnerabilities, demanding robust secrets management.

Distributed Infrastructure

Secrets scattered across multi-cloud, containerized, and on-premises environments.

Compliance Burdens

Strict regulations (GDPR, SOX, PCI-DSS) require stringent access control and audit trails.

Secret Sprawl

Unmanaged credentials proliferate, increasing attack surface and risk

Manual Processes

Inefficient, error-prone, and unable to scale with modern DevOps velocity.

Credential Compromise

95% of cyber attacks leverage compromised credentials

The Complete Secrets Management Solution

Vault centralizes and secures access to secrets and other sensitive data. It dynamically generates credentials and provides robust encryption, ensuring end-to-end security and compliance.

- **Centralized Secrets Management:**
Unified control for all sensitive data
- **Dynamic Secrets:**
On-demand, short-lived credentials for enhanced security
- **Data Encryption as a Service:**
Secure data at rest and in transit without complex key management
- **Identity-Based Access Control:**
Fine-grained control tied to trusted identities
- **Complete Audit Logging:**
Immutable trails for compliance and forensics

Built for Zero-Trust Security

Vault's architecture is designed from the ground up to enforce zero-trust principles, ensuring only authenticated and authorized entities can access sensitive information.

Comprehensive Secrets Management Platform

Static Secrets Management

- Securely store and manage traditional, long-lived secrets like API keys and database passwords.
- Version control and rollback capabilities for all secrets
- Fine-grained access control lists (ACLs) for granular permissions.

Dynamic Secrets Generation

- Generate on-demand, short-lived credentials for databases, cloud providers, and more
- Automatic revocation and rotation minimizes exposure window.
- Reduces the risk of credential compromise and lateral movement.

Encryption as a Service

- Encrypt and decrypt data without Vault ever storing the actual encryption keys.
- Decouples encryption from application logic, simplifying development.
- Supports various encryption algorithms and key management policies.

Real-World Applications Across Industries

Database Credential Management

Automate rotation and secure access to databases for applications and developers.

Cloud Infrastructure Security

Manage access tokens and API keys for AWS, Azure, GCP, and other cloud services.

Certificate Management

Automate issuance, renewal, and revocation of TLS certificates for internal and external services.

Application Security

Inject secrets securely into applications at runtime, eliminating hardcoded credentials.

Cyber Sentinel
Detect | Defend | Comply

Why Leading Organizations Choose Vault?

Operational Efficiency

Automate secrets lifecycle, reduce manual overhead, and accelerate software delivery.

Enhanced Security Posture

Minimize attack surface, enforce least privilege, and strengthen compliance across environments.

Business Value

Reduce security-related incidents, streamline audits, and foster innovation with secure development practices.

Choose the Right Solution

Vault offers flexible deployment options to meet varying organizational needs, from open-source to fully managed enterprise solutions.

USPs		CyberSentinel	Splunk	SentinelOne
	SOC AI	✓	✓	✓
	UEBA	✓	✓	✓
	Automated Malware removal	✓		
	Automated Brute force attack stop	✓		
	Automated DDOS attack removal	✓		
	Automatic remediation	✓		
	Automatic case management	✓		

Best Practices for Vault Deployment

A phased approach ensures successful adoption and maximizes the security benefits of Vault within your organization.

Transform Your Security Posture with Vault

Key Takeaways

Vault centralizes, secures, and automates secrets management.

It enforces zero-trust principles for robust security.

From open source to managed service, Vault scales with your needs.

Vault offers a comprehensive solution to the evolving challenges of secrets management, driving both enhanced security and operational efficiency.

Cyber Sentinel

Virtual Galaxy Infotech Limited

Conclusion

Comprehensive Protection

Secures your organization across the entire digital landscape — from internal networks and identities to mobile apps and APIs

AI-Driven Intelligence

Real-time threat detection and automated response powered by advanced machine learning.

Modular & Scalable

Built as an integrated yet flexible suite — deploy what you need, scale as you grow.

Compliance Ready

Simplifies adherence to GDPR, HIPAA, PCI-DSS, and other regulatory standards.

Fast Time to Value

Easy to deploy with measurable ROI in weeks — not months.

Future-Proof

Continuously evolving to meet tomorrow's threats with today's innovation.
